Constraint Satisfaction Problems

Lab 6

Exercise

Use the following pseudocode to complete the program `constraints_template.py`.

Implement the recusive_backtrack function

Remember to **incorporate the other methods** already present in the file.

```
function RECURSIVE-BACKTRACKING(assignment, csp)
    if assignment is complete then return assignment
    var ← SELECT-UNASSIGNED-VARIABLE(VARIABLES[csp], assignment, csp)
    for each value in ORDER-DOMAIN-VALUES(var, assignment, csp)
        if value is consistent with assignment given CONSTRAINTS[csp]
            add {var = value} to assignment
            result ← RECURSIVE-BACKTRACKING(assignment, csp)
            if result ≠ failure then return result
            remove {var = value} from assignment
    return failure
```

Exercise 2

Copy and modify the program from the exercise to use:

→ The map of South America (on the next slide)

→ 4 colors (red, green, blue and yellow)

Costa Rica
Panamá
Venezuela
Guyana
Suriname
Guyane (Fr)
Colombia
Ecuador
Perú
Brasil
Bolivia
Paraguay
Uruguay
Chile
Argentina

Challenge

Optional

Implement forward checking and arc consistency for the previous exercise.
